#### **ANALYSIS**

Sudan currently hosts the world's largest humanitarian operation. Urgent needs are particularly concentrated in Darfur, where conflict and instability continue to plague local people, and in Southern Sudan, where the consequences of decades of civil war have wreaked havoc on the lives of civilians. Conditions in the border areas between north and south ("the Three Areas") and in the eastern states also demand humanitarian action.

In 2009, CERF funding in Sudan focused on Darfur and Southern Sudan, where it was critical to provide relief in the aftermath of several unexpected emergencies. These emergencies threatened to exacerbate people's vulnerability and without rapid action would have compounded the plight of families already mired in the effects of violence, drought and other misfortune. In particular, three major events required CERF funding in 2009: attacks by the Lord's Resistance Army (LRA), the expulsion of 13 international NGOs from Northern Sudan, and an emerging food crisis in the south.

The unforeseen onset of these crises threatened to overwhelm existing humanitarian budgets and planning for the year. CERF funding allowed UN agencies to mitigate the impact of these events, thereby filling critical service gaps and tempering the effect on local people. This analysis summarizes the impact of CERF funding in 2009, as well as provides an overview of the issues that prompted the original applications.

## Added value of CERF funding

Every CERF allocation to Sudan resulted in additional funding for emergencies that threatened to exhaust existing resources. In most cases, CERF-funded projects had been included in the 2009 Humanitarian Work Plan, gaining greater urgency in light of sudden developments on the ground. Consequently, CERF funding was able to scale up existing projects capable of mitigating the effects of crisis, thereby catalysing a more concentrated response to these issues.

Given the rapid onset of these emergencies, all CERF grants to Sudan in 2009 were through the rapid response window, and the CERF's greatest added value was its speed of funding. This was especially true for crises that, like the NGO expulsions, threatened to spiral out of control without quick funding for multiple sectors. This rapidity was essential to containing the consequences of all these emergencies – none of which developed into true catastrophes, despite their potential to do so.

Flexibility was another key asset, particularly for agencies applying CERF funds to Work Plan projects already underway. With CERF funding, projects could more easily adapt their priorities to reflect rapidly evolving conditions on the ground. In addition, by directing CERF money towards priority needs, agencies could "kick start" the sort of visible crisis response that could potentially coax additional bilateral funding.

Cumulative measures of the CERF impact are problematic due to risks of double counting, especially given that many people may have benefited from multiple projects in a single emergency. This is particularly true in cases where CERF funding was leveraged simultaneously with support from other donors. A rough estimate of total beneficiaries reached by the CERF in 2009 is approximately 1.3 million people. By sector, total beneficiary estimates break down along the following lines:

• Protection: 43,000 individuals

Water and Sanitation: 1,049,490 individuals

• Education: 30,000 children

Health and Nutrition: 585,094 individuals

NFIs and Emergency Shelter: 231,794 individuals

Food Security: 1,345,000 individuals

With total funding of \$25.8 million, CERF grants constituted the eighth-largest funding source for humanitarian action in Sudan in 2009, indicating a pronounced effect on needs in the country. The scope of this effect is corroborated by the beneficiary-centred results of CERF funding at the project- and sector-levels, which are described below.

#### **Context and results**

Three major emergencies prompted CERF funding requests through inter-agency processes in 2009. This section briefly describes the context of each request, as well as major results, grouped by sector, for each emergency. A brief analysis of two additional, stand-alone grants follows this discussion. Greater details on project results appear in the Results chapter.

#### LRA attacks in Southern Sudan (\$4,978,615; approved 16 April 2009)

Following a military offensive against LRA strongholds in the Democratic Republic of Congo (DRC) in late 2008, the LRA unleashed a series of attacks in Southern Sudan that by April 2009 had killed hundreds and forced an estimated 40,000 people from their homes. Concentrated in desperately poor areas along the border with DRC, these attacks spurred some 16,000 refugees to enter Southern Sudan, additionally straining the area's resources. Altogether, humanitarian actors estimated that 100,000 civilians in Southern Sudan were affected by April – significantly more than original projections of 10,000 to 20,000 people. As needs dramatically outstripped resources, United Nations agencies organized an inter-agency CERF request that prioritized six emergency sectors. The availability of CERF funding – especially its rapidity – was crucial to mitigating the impact of LRA attacks in the area.

#### Protection (\$1,871,022)

The LRA record of atrocities and associated human displacement created conditions for a protection crisis in Southern Sudan. For children, LRA raids could result in abduction or separation from their families as they fled for safety. Meanwhile, many of the refugees flowing in from DRC settled in areas close to the border, exposing them to further attacks and complicating aid delivery. Both cases called for urgent, time-critical protection activities. CERF funding allowed the United Nations Children's Fund (UNICEF) to support vulnerable children and their families, including 204 escaped kidnap victims, 348 unaccompanied children and over 3,500 individuals, with family reunification, psychosocial support, foster care and other services. CERF funding also enabled the United Nations High Commissioner for Refugees (UNHCR) to establish formal refugee sites away from volatile border areas, register 18,000 refugees, and provide services in education, health and water and sanitation.

#### Water and Sanitation (\$1,495,239)

As people fled their homes and congregated in safer areas, clean water became a critical need – for drinking, washing and waste disposal. In order to meet these needs, humanitarian partners required funding that would provide basic Water Sanitation and Hygiene Programme (WASH) services quickly enough to minimize the risk of disease. CERF funding played a critical role in averting widespread outbreaks of acute watery diarrhoea and other diseases common to displacement. CERF support of UNICEF enabled access to clean water for 52,000 people, in addition to the use of sanitary latrines by 33,000 people and hygiene campaigns reaching 49,000 people. International Organization for Migration (IOM) efforts complemented these programmes, using CERF money to reach 60,000 people with water and sanitation activities.

#### Education (\$222,502)

As LRA violence scattered families, schooling was often interrupted, thereby further disadvantaging local children. Establishing safe learning spaces promised to afford children a sense of normality amid the turmoil. UNICEF relied on CERF funding to ensure access to education for 30,000 children in affected areas, providing basic school supplies and working simultaneously to bolster local government abilities to monitor education.

## Health and Nutrition (\$1,202,630)

Health and nutrition conditions in LRA-affected areas risked rapid deterioration as people moved from their homes in search of refuge. Providing basic health services and nutrition support emerged as an essential task. UNICEF used CERF funding to augment the reach of two existing projects in LRA areas, ultimately vaccinating over 30,000 children against measles and over 25,000 women of child-bearing age against tetanus. Malnutrition programmes treated over 18,000 severely malnourished children and equipped 14 therapeutic feeding centres.

## NFIs and Emergency Shelter (\$403,120)

As people fled their homes following the attacks, they risked landing in areas without available shelter and other supplies, leaving them exposed to the elements and unable to complete basic survival tasks. Providing these people with non-food and shelter materials was crucial, including plastic sheeting, blankets and cooking kits. CERF funding allowed UNICEF to reach some 1,600 households with these materials, while IOM delivered similar kits to an estimated 1,900 more families.

## Food Security and Livelihoods (\$385,414)

A major effect of LRA-related displacement was the total interruption of people's livelihoods. FAO used CERF funding to help people manage their vulnerability, distributing 171 metric tons of seeds to 9,000 households – thereby generating potential market value up to \$1 million. CERF money allowed the project to pre-position needed seeds and tools – essential to meeting agricultural time constraints.

## NGO expulsions from Northern Sudan (\$10,775,095; approved 12 May 2009)

Following the announcement of an International Criminal Court (ICC) indictment of Sudanese President Omar al Bashir on 3 March 2009, the government of Sudan expelled 13 international NGOs and revoked the licences of 3 national NGOs accused of collaborating with the ICC investigation. Affected agencies had been delivering a substantial portion of humanitarian assistance in Northern Sudan, particularly in Darfur, and their departure quickly created enormous gaps in aid delivery, initially affecting an estimated 1.1 million people. All sectors faced enormous challenges, but shortcomings in food delivery, water and sanitation, nutrition, and health quickly emerged as the most severely compromised.

In the absence of capable NGO partners, UN agencies re-oriented their activities in order to fill as many of these gaps as possible. The rapid provision of CERF funding allowed many agencies to fulfil tasks for which they otherwise would have had no budget, offering a critical line of defence against catastrophe. CERF funding for this crisis reached an estimated 1.1 million beneficiaries who would have otherwise quite possibly fallen through the cracks. Activities were focused on four sectors:

#### Health and Nutrition (\$3,426,311)

The NGO expulsions stranded an estimated 840,000 people without full access to health or nutrition services. Given widespread human displacement and associated poor living conditions in Darfur, these service cuts threatened to dramatically increase malnutrition and foster disease outbreaks. UNICEF leveraged CERF funding into improved health services

for almost 1.8 million Internally Displaced Persons (IDPs) and ensured that at least 90 percent of camp residents received a full course of vaccinations. As a result, CERF funding helped prevent the outbreak of any cases of acute watery diarrhoea, and kept acute jaundice syndrome within manageable levels. CERF support helped UNICEF to re-open 34 therapeutic feeding centres, providing treatment for over 5,000 children in the grant period.

- Food Security and Livelihoods (\$2,458,040)
  Four organizations affected by the expulsions worked as partners in delivering WFP food assistance across Darfur, and their departure left 1.1 million people at risk of hunger. The immediate priority became the maintenance of food aid deliveries across the region, meaning that WFP required additional funding at once in order to ensure continued assistance. CERF support enabled WFP to take over food distributions that had previously been managed by expelled NGO partners, ultimately reaching all 1.1 million people threatened with hunger.
- Water and Sanitation (\$3,649,149) Eight organizations specializing in water and sanitation were expelled from Darfur, threatening vulnerable Darfuris' access to these critical services. Ensuring that this reduction did not translate into increased incidence of disease became an urgent priority. As a result of rapid CERF funding, UNICEF was able to bridge the most important gaps, facilitating access to safe water for over 500,000 IDPs and constructing or rehabilitating latrines that serve over 100,000. These efforts played a significant role in preventing any case of acute watery diarrhoea (AWD) or cholera in Darfur in 2009, in spite of the increased challenges posed by reduced services.
- Non-Food Items and Emergency Shelter (\$1,241,595)
  With over 2 million displaced from their homes, many Darfuris depend on the provision of non-food items and shelter materials in order to cope with uncertain living conditions. Humanitarian partners had organized a common pipeline to deliver these goods, tasking different agencies with responsibilities for procurement, warehousing, transport and delivery. The expulsion of a major partner threatened the pipeline's stability, particularly in transport, potentially cutting people off from these critical supplies. CERF funding allowed IOM to immediately take over for the expelled partner, transporting 1.4 million NFIs to 86 locations, ultimately benefitting an estimated 216,000 people.

<u>Food crisis in Southern Sudan</u> (\$8,120,478; approved 25 September – 29 October 2009) Several unexpected shocks significantly multiplied people's risk of hunger and malnutrition in Southern Sudan in late 2009. Instability in the wake of LRA attacks and inter-tribal violence constituted the greatest factor, entirely disrupting the livelihoods of an estimated 250,000 displaced people. The failure of a seasonal harvest and rises in food prices in many areas exacerbated this trend, leaving up to 1.5 million people severely food insecure – far more than original projections. Although response efforts were already underway, humanitarian partners sought CERF funding to compensate for the rapid deterioration in food security conditions, designing an integrated package focused on two critical sectors.

■ Food Security and Livelihoods (\$6,620,659)
Leveraged with other funding, CERF support covered World Food Programme (WFP)
emergency operations for over a month in Southern Sudan and delivered food aid to
270,000 via general distribution and an additional 30,000 through supplementary feeding.
Taking a longer view, CERF support for FAO also worked to help rebuild disrupted

<sup>&</sup>lt;sup>1</sup> This figure represents the best estimate at the time of the CERF application in September 2009, according to the Office of the Deputy Humanitarian Coordinator (DHC) in Juba. Current estimates project that upwards of 350,000 people were displaced throughout 2009.

livelihoods for over 20,000 vulnerable families in an effort to prevent emergency conditions from shifting into permanent dependence.

Health and Nutrition (\$1,499,819) Malnutrition is a frequent corollary to widespread food insecurity, and CERF funding allowed UNICEF to prioritize treatment in the worst-affected areas, ultimately reaching 18,315 severely malnourished children. CERF support enabled the pre-positioning of critical supplies that made this treatment possible, in addition to supporting expansive nutrition education programmes.

#### Health conditions in Darfur (\$1,303,676; approved 6 May and 3 August 2009)

The World Health Organization (WHO) received two stand-alone grants to improve health conditions in Darfur, focusing on the needs IDPs and host communities. The first project sought urgent funding to contain small meningitis outbreaks in the midst of the NGO expulsions. CERF support was instrumental in mobilizing a mass vaccination campaign that reached 500,000 people, thereby preventing a serious epidemic. The second project worked to bolster IDP access to hospital services. This project used CERF money to avert potentially catastrophic consequences for IDPs who risked losing access to secondary health centres and facilitated hospital services for an estimated 135,000 people.

#### **CERF** and humanitarian coordination

CERF applications were mostly bundled into inter-agency requests addressing crises that required action in multiple sectors. As such, CERF funding served as a vehicle for strengthening coordination within sectors and across the United Nations system, in addition to a bulwark against further deterioration in humanitarian conditions.

Process of CERF application in-country – role of HCT, inter-sector collaboration, OCHA, etc.

#### Filling gaps – and filling stomachs – in Darfur

Hassan Ahmad, the supervisor of a therapeutic feeding centre in Abu Shok IDP camp near El Fasher, flashes a weary smile as he recalls the days after learning that the government had expelled 13 international NGOs in March 2009. "People," he says haltingly, "were extremely worried."

Ahmad's clinic had been run by *Action contre la faim* (ACF), a French NGO specializing in nutrition management that was kicked out of the country following an International Criminal Court indictment of the Sudanese president in connection with the conflict in Darfur. "This centre is very important for the community," he explains. "People were scared that if ACF left, it would close completely."

Before the expulsions, Ahmad's centre and others like it served a total estimated population of 100,000 people in Abu Shok and nearby El Salaam camps, helping families uprooted by the fighting in Darfur to combat malnutrition. Services included therapeutic and supplementary feeding, as well as nutrition counselling.

"ACF was a really important partner that ran clinics across Darfur ... We did a survey after the expulsions and saw that malnutrition was starting to increase," says Leo Matunga, a UNICEF nutrition officer, on a visit to the Abu Shok centre. Recognizing the potential for a nutrition crisis, UNICEF took over operations from ACF in March, quickly exhausting its own reserve of emergency funding.

"The expulsions came near the start of the hunger season in Darfur, and we really didn't have the budget to keep these operations going," explains Matunga. "That's why we turned to the CERF in April, to get enough funding to cover three months of operations and buy time to find other partners."

The CERF awarded \$1.5 million to UNICEF in April for a project designed to keep 35 feeding centres open across Darfur. Over the next three months, 34 of these centres treated 14,000 children via in- and out-patient programmes – a critical service whose cancellation could have spelled catastrophe for local families.

One of these centres is the former ACF clinic in Abu Shok, where a recent visit offered no sign of the upheaval. "I came here yesterday because my baby was crying all the time," explains Gisma, a mother who fled Korma in North Darfur five years ago, sitting in a recovery room with her four-month-old son, Mohammed. "He would take my breast but couldn't get any milk. The treatment has been good – look at him now; he's quiet," she says, as Mohammed sleeps on her shoulder.

Mohamed, like other children admitted for a course of treatment, will likely spend seven days at the centre with his mother, who will also use the time to learn about good nutrition practices. "The midwife tells us to be patient and gives us advice on how to produce milk – it's a good thing. ... Without this centre, I would have to go to El Fasher. It's difficult to get there, and everything costs money – transport, everything. Also, they might not even admit [Mohammed] because he's so young."

"There is already a difference after just one day," says Gisma. She smiles, thinking about his future. "I hope for him to grow up, to run and play like other kids. He should have the same chances as the others – even to be president of Sudan."

While CERF money has allowed the Abu Shok centre and others like it to remain operational, UNICEF is clear about the need to find better-suited partners to manage them. "Direct supervision is not what UNICEF usually does," says Matunga, the UNICEF nutrition officer. "We are trying to recruit capable NGOs to manage the centre...and the government must take responsibility [as well]."

In fact, the government has signalled its intention to pay for nutrition centres' operating costs, a positive development given that current UNICEF support expires at the end of March 2010.

In the meantime, the centre continues to serve vulnerable families in the area, something that makes Kubra, a midwife who was forced from her home in Jebel Si in 2004, quite proud. "We work with the kids and give advice to the mothers – some of them don't know anything about good nutrition practices," she says matter-of-factly. "I can help complete this for them. I thank God to be able to do this work – I know it is helpful."

### Finding clean water in Darfur

Entering Zam Zam camp for internally displaced people in North Darfur, some 15 kilometres from El Fasher, UN agencies must travel with armed escorts from the UNAMID peacekeeping mission. Flanked by six or seven security vehicles, a first-time visitor is a little surprised by what he finds on a trip to one of the camp's water points. Throngs of mostly women and children are talking and laughing, as children vigorously shake their jerry cans, filled part-way with pebbles and sand, to create a thumping percussion.

"The sand and pebbles are to shake the dirt out," explains Said Ahmed Mohammed, a UNICEF water, sanitation and hygiene (WASH) officer, over the lively din. "The water attendant has forbidden people to fill their jerry cans if they're dirty so that people don't drink dirty water."

This particular water point seems almost like a town square, with donkeys tied up at the side entrance, and friends and families chatting as they jostle for access one of several hand pumps fed by the water system. A borehole was installed here with CERF funding in April 2009 and now meets the water needs of some 300 families per day.

Maria, a native of Um Hashaba who fled her home six years ago during war, has come to collect water, a trip she estimates that she makes at least three times a week. According to UNICEF, many families come everyday, and the water point's 5,000-litre water bladder – enough to fill some 300 jerry cans – is emptied five times a day, and twice as often in the summer.

"I use this water for drinking, cooking, washing clothes, bathing – everything I need," says Maria, a bit surprised at the question. "I live [about 200 metres] from here and used to go to another place for water – maybe [800 metres away]."

Maria is the only one in her family who fetches water for the others, a job that sends her back and forth from the water point with her donkey and several jerry cans. Having a site just 200 metres away makes a difference, giving Maria more time to focus on other chores and taking up less of her energy. But the biggest difference, she says, is the price – free. "Before, we had to pay one pound for every four jerry cans, at the old site," she explains. With twelve people in her family and an estimated daily budget of 20 pounds per day, the savings for Maria quickly add up.

In 2009, UNICEF received CERF money for two projects that maintain sites like the one in Zam Zam across Darfur. When the Sudanese government expelled 13 international NGOs working in the region after an International Criminal Court (ICC) indictment of the Sudanese president in March, it created serious gaps in life-saving sectors, not least in water and sanitation. These gaps were especially critical in Zam Zam, where new IDPs had recently arrived and were placing added strain on the system. In Zam Zam alone, the CERF ensured access to safe water for 100,000 people like Maria and built 950 latrines that improved sanitation for around 4,000 families.

On the other side of El Fasher town, in the Abu Shok camp for internally displaced people, people appear similarly pleased. "Day and night – it works all the time," explains Aziza, originally from Jebel Si, pointing to the hand pump. "If it breaks, a mechanic comes in ten minutes to fix it. We are the mechanics!"

The project has worked with the government's Water, Environment and Sanitation department (WES) to encourage community responsibility for the water system, including training and

outreach on environmental concerns – particularly in light of alarming drops in the water table around El Fasher over the last year.

"There is very limited water here, and people suffer for that," explains Shamsiya, the WES camp manager in Abu Shok. "We did house-to-house visits to explain the environmental problem to people and their families, so they would try to use less water. And they understand – they feel like this water is theirs, so they need to save it."

Back at the water point, Aziza agrees. "I know there is less water than there used to be. That's why we use less now – the elders told us about this."

Altogether, these two projects – at a total of \$3.6 million in CERF contributions – benefited upwards of 1 million people – IDPs and residents alike – at sites across Darfur. These programmes have gone a long way towards discouraging outbreaks of diseases like acute watery diarrhoea and cholera – both of which can thrive in displacement situations – as well as improving people's awareness of environmental issues that will be crucial to Darfur's future.

On a personal level, they have also significantly improved the lives of people like Aziza, as well. "In Jebel Si, there were no hand pumps like this, just [hand-dug wells]. Getting water from the wells was easier," she says, hunched over, as she rapidly lifts the pump's lever up and down. "But for clean water, this is better."

#### Strengthening hospitals in Darfur

On 13 September 2009, Tulus rural hospital, one of the WHO-supported hospitals in South Darfur, received twelve causalities of armed conflict. All of the patients had sustained gunshot wounds requiring surgical interventions. The hospital provided emergency treatment to all the patients and managed to stabilize four of them. A more advanced surgical intervention was required to save the lives of eight patients. These patients were referred to Nyala Teaching Hospital, the referral centre for all South Darfur rural hospitals, as well as nearby localities of West Darfur.

The World Health Organization has been providing support to sixteen hospitals, including Nyala Teaching Hospital, since 2004. The support included provision of drugs and consumable materials, training of health workers, conducting supportive supervision, renovation of infrastructure and payment of incentives.

In March 2009, health service delivery in Darfur was challenged seriously as a result of the expulsion of INGOs following an ICC decision to indict the President of Sudan. A month later, as a result of funding gaps and changing donor priorities, WHO was forced to limit its support to rural hospitals. It was at this dire occasion that the CERF intervened to sustain the functions of state hospitals. Through this funding, WHO was able to provide the five state Hospitals in Darfur, including Nyala Teaching Hospital, with essential drugs, incentives for key hospital staff and running costs.

The availability of IV antibiotics, suturing materials and other supplies through CERF support helped in salvaging the lives of the eight victims. This is not an isolated incident that happened only once. The state hospitals, including Nyala Teaching Hospital, have been catering to the needs of IDPs and conflict-affected people in Darfur, despite ongoing resource constraints.

The value and timeliness of CERF support can be substantiated using some facts and figures from the supported hospitals, in this case Nyala Teaching Hospital. Between the months of August 2009 to October 2009, a total of 3,198 IDPs received free health services at this

hospital. This includes 2,450 out-patient consultations, 587 admissions, and 161 surgeries, of which 13 were Caesarean sections. The direct financial support provided to Nyala hospital from the CERF supported free treatment of IDPs and incentives for staff, ensuring that the hospital was ready to treat Darfur's conflict-affected, like the twelve gunshot victims who arrived on 13 September.

|----------------------|--|-------------|-------------|--|--|--|---|---|---|
| Health and Nutrition | Agency UNICEF  Project code 09-CEF-027-B  Project title Emergency support for therapeutic and supplementary feeding centres and nutrition surveillance | \$1,468,673 | \$1,889,578 | 3,000 severely acutely malnourished children (predominately under 5) 7,000 moderately acutely malnourished children and pregnant and lactating women | Maintenance of 35 therapeutic feeding centres (TFCs) that meet Sphere standards  Maintenance of 15 supplementary feeding centres (SFCs) that meet Sphere standards  Training for 75 staff trained on selective feeding treatment protocols  Completion of 12 nutritional surveys | Re-established operations in 34 therapeutic feeding centres  Provided incentives for expelled NGO staff, covered running costs and hired additional staff  Supported centres' rehabilitation prior to start of the wet season  Re-established all SFPs by having NGOs discussing the responsibilities with the government, which ran remaining centres with UNICEF support  Between April to July, 4,413 children (6-59 months old) were admitted into the TFC's centres previously run by the expelled NGOs' and 1,495 into SFPs.  Procured and distributed additional therapeutic foods to fill gaps left by NGOs that did not participate in the common pipeline  Provided 8,404 newly displaced children in Zam with | Enabled UNICEF to act as provider of last resort, given that all activities were outside existing UNICEF budget  Enabled gap filling in terms of financial support, supplies, and staff to ensure treatment programmes continued without interruption | Analysed monthly TFC and SFP performance statistics to identify performance issues  Conducted routine centre-based monitoring by securing additional technical support  Tracked trends in localized nutrition survey information in order to identify deteriorations in the nutrition situation | Universal admission of any child to treatment programmes that fulfil criteria (no formal disaggregation)  Attention to gender breakdown in nutrition survey results, leading to responses that reflect concerns for gender balance (none considered out for normal bounds for gender balance to date) |

| Health and Nutrition | Agency UNFPA  Project code 09-FPA-016  Project title Reducing the Incidence of maternal Deaths in a complex Emergency | \$783,005 | \$2,482,594 | 314,309 women of reproductive age | Continued operation of clinics previously run by expellend NGOs in Darfur, including manpower, supplies and equipment for emergency obstetric care (EmOC) services, including referral systems | Covered 464,309 WRA, thereby stabilizing RH services and bridging gaps caused by the expulsion of NGOs in 36 RH facilities  Contributed to achieving reduction in maternal mortality and enhanced successful end results of pregnancies and child births in the affected population  Created awareness of RH services and risk reduction among communities  Committed all expenditures in a timely manner  Worked to procure 6 standard | Allowed project to begin immediately after needs were identified and implementation strategy was approved, due to rapid funding | Conducted joint supervision visits that relied on standardized supervisory tools  Organized bilateral and joint meetings to assess the progress of implementation  Updated project implementation status in broader forums through regular attendance at health sector and RHTF meetings | Priority targeting of women, with equal opportunities for training and other activities |
|----------------------|---|-----------|-------------|-----------------------------------|--|---|---|--|---|
|                      |   |           |             |                                   |  | Worked to   |   |  |   |

| Water and Sanitation | Agency UNICEF  Project code 09-CEF-027-C  Project title Integrated WASH Programme for reaching populations in Darfur affected by NGOs suspension | \$2,740,172 | \$14,185,821 | 1.2 million<br>(192,000<br>under 5 and<br>288,000<br>women of<br>child bearing<br>age) | Sustained access to safe water supply for about 350,000 IDPs in 14 locations/camps for three months.  Sustained access to sanitary facilities for 180,000 IDPs through replacement or/and dislodging of excreta from the latrine facilities  Greater awareness of hygiene issues among 989,490 IDPs, including provision of soaps to encourage hygiene practices  Reduced risk of diseases, such as diarrhoea and cholera, leading to reduced morbidity and mortality, particularly among the children and other vulnerable IDPs | Benefited 989,490 persons including 192,000 under five children, 12,000 school children from 30 schools, including girls schools, and 288,000 women of child bearing age  Maintained access to safe water for 370,240 IDPs at 24 locations for three months via 57 motorized water systems and chlorination  Maintained access to safe water for 35,000 IDPs by drilling 84 boreholes equipped with hand pumps, building one motorized water systems and rehabilitating two motorized water systems  Improved access to safe water for 12,000 children at 30 schools by drilling 30 boreholes equipped with hand pumps  Built new latrines at 23 schools, benefiting 14,900 children  Provided access to safe | Filled major gaps created by the expulsion of NGOs in WASH services | Conducted regular monitoring in conjunction with all stake holders — including the government at state and national levels  Provided biweekly presentations to the Federal Minister of Social Welfare and Humanitarian Affairs on the status of services in the 14 camps | Equal attention to women, with particular focus on women of child-bearing age |
|----------------------|--|-------------|--------------|--|--|---|---|--|---|

| Agency UNICEF  Project cod 09-CEF-027  Project title Meeting urgent WAS needs in Zar Zam camp (North Darfu | D<br>H | \$14,185,821<br>(same project<br>as above) | Roughly<br>100,000 IDPs<br>and<br>established<br>populations in<br>Zam Zam<br>camp | Access to safe water, sanitation and hygiene services for 41,000 newly arrived IDPs  Provision of safe water for an estimated 55,000 existing affected people in Zam Zam via operation and management of exiting water sources  Reduced risk of diseases, such as diarrhoea and cholera, | Provided 20,000 persons with access to safe water through construction of two motorized water systems with pumps, generator housing units, water tanks, water collection tap stands and distribution network  Provided 91,700 persons with safe water by operating and maintaining  | Constituted the only available funding source for UNICEF to respond to the urgent needs of newly displaced people in Zam Zam camp | Conducted regular monitoring in conjunction with all stake holders — including the government at state and national levels  Provided biweekly presentations to the Federal Minister of Social Welfare and Humanitarian Affairs on the status of services in the 14 camps | Larger number of female and child beneficiaries, as the newly displaced persons (41,000) and the additional 50,000 waraffected people in Zam Zam were largely children and women |
|--|--------|--|--|--|---|---|--|--|
| Water and Sanitation   |        |  |  | leading to reduced morbidity and mortality, particularly among the children and other vulnerable IDPs  | eight motorized water systems along with regular chlorination for six months  Provided 19,000 persons with access to improved means of excreta disposal through construction of 950 latrines  Reached 91,700 persons in with hygiene and sanitation information, along with soap, through four hygiene and two environmental sanitation campaigns  Trained 60 hygiene promoters and 60 Village Health |   |  |  |

Committee

| NFIs and Emergency Shelter |  | Agency IOM  Project code 09-IOM-009  Project title NFI Common Pipeline Operation: Transportation | \$1,241,595 | \$3,679,000 | 215,688<br>individuals<br>(project total<br>1,244,957) | Transportation of approximately 14,000 cubic metres of NFIs reaching 110,000 households (660,000 people) in the three Darfur States  Fully staffed, operational and immediate transport fleets available in all locations that support NFI replenishment and distributions  Pre-rainy season replenishments and timely distributions completed for vulnerable IDPs and/or disaster-affected populations in all Darfur states | Reached 215,688 individuals with CERF funding (out of 1,244,957 for entire project) in 86 locations, improving their living conditions and preparedness for seasonal changes  Moved a total of 1,354,511 NFIs (20,731 cubic metres) using 469 trucks  Served 23 agencies and partners | Enabled resumption of transport phase of the NFI Common Pipeline after expulsion of the managing NGO  Allowed IOM to initially take over this responsibility in May 2009, later relying on other funding | Tracked delivery of stock through pro-forma invoice for lost/damaged NFI's and dedicated waybill booklet  Notified final recipients and other partners in advance of NFIs being en route  Performed constant evaluation of transport providers and selection and implementation methodologies, as reflected in regularly updated SOP | Equal benefits by gender among all targeted LRA-affected households  NFI kits included female clothes.  Other NFIs transported included cooking sets and jerry cans, more often used by women for family feeding and fetching water |
