When people struck by emergencies need health care
Immediate CERF funding is there to save lives and protect people.

The UNITED NATIONS has a CENTRAL mechanism to ensure that in any EMERGENCY people have the RESPONSE they need, through a global FUND from all nations and for all people.

CERF allocates approximately US$450 million to emergencies across the globe. On average, US$65 million of these ensure urgent health assistance for 20.5 million people.

CERF 2016 HEALTH ALLOCATIONS

In 2016, more than half of CERF’s health support went to emergency responses in Africa.

Millions of people caught in humanitarian crises have no access to basic healthcare and epidemic diseases like cholera threaten entire populations.

CERF ensures rapid funding for life-saving health assistance when crises strike and also enables aid when the world’s attention to the crises later fades away.

cerf.un.org
In Central Africa, CERF is reaching millions who are in need of life-saving humanitarian assistance.

In a disaster (or in protracted conflict) CERF sees a poised bulwark in advance and directs resources to where they have the greatest impact. When a crisis occurs, humanitarian organizations are often able to provide life-saving assistance within hours, allowing them to bolster life-saving work in record time. CERF funding fills critical gaps, transparently and based on life-saving priorities, collectively by humanitarian partners on the ground.

Each year on average, CERF works partners to reach 20.5 million people with health services, 15 million people with water and sanitation, 10 million people with protection, 5 million people with food, and 5.5 million people with shelter.
